## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Applicant's attorney R. Crawford on March 10 and 11, 2009.

The application has been amended as follows:

The Title of the invention has been replaced by the following:

Method For Removing Potassium From Ash Produced in a Kraft Pulping Process  
Recovery Boiler Using A Na-type Cation Exchange Organic Resin

The Abstract of the invention has been replaced by the following:

In the process for producing kraft pulp, performing a potassium ion removal step of flowing an aqueous solution containing ashes recovered from a combustion exhaust gas generated in a black solution combustion step by a dust collector through a packed bed filled with a sodium-type cation exchange organic resin to adsorb and remove potassium ions contained in the aqueous solution; and a regeneration step of treating the cation exchange organic resin used in the potassium ion removal step with a solution consisting essentially of aqueous sodium hydroxide to regenerate the cation exchange resin, where a fraction recovered from the

potassium ion removal step which is rich in sodium sulfate and sodium carbonate is recycled to the black solution concentrating step, and a sodium hydroxide effluent recovered from the regeneration step is recycled to a bleaching step and used in a bleaching process.

In the specification on pg. 12 paragraph 2 line 2-3, after the words "DIAION (registered Trademark) UBK550" add the following is added ", Na-type cationic resin with a sulfonic active group," before "produced by Mitsubishi".

Claim 1 has been amended as follows:

In step (G), the word 'organic' has been added after 'Na-type cation exchange' and before the word 'resin'.

In step (H), first line and third line, the word 'organic' has been added after 'cation exchange' and before the word 'resin' (added in both locations).

2. The following is an examiner's statement of reasons for allowance:

It is not taught or suggested by the prior art to remove potassium from recovery boiler ash in a Kraft process using a Na-type organic exchange resin and regenerating said resin using a solution consisting essentially of sodium hydroxide. The effluent generated is used in the bleaching process of pulp producing process. This differs from the prior art which teaches the use of an acid and then sodium hydroxide to regenerate organic resins. It is also known to use mineral zeolites to perform ion exchange to separate potassium and sodium. It is known to

regenerate said zeolite using a Na ion containing regenerate, which could be sodium hydroxide. However, a *mineral* based cationic zeolite is not an *organic* resin.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent 5,980,717 PUDAS discloses a process for separating out potassium from sodium using a zeolite that can be regenerated without using acid using only a sodium electrolyte [abstract and column 5 lines 1-25]. Sodium hydroxide is a common sodium electrolyte. A zeolite is an inorganic mineral not an organic resin. In contrast PUDAS teaches organic resins which require sulfuric acid for regeneration [column 9 lines 10-25].

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ANTHONY J. CALANDRA whose telephone number is (571) 270-5124. The examiner can normally be reached on Monday through Thursday, 7:30 AM-5:00 PM.
